reception systeem
collect patient information
include
Schedule patient appointmen
include
Schedule hospital admission
Receptionist
register patient
extend
generate medical report
include
collect patient information
extend
extend
file insurance
assign bed

Table 1: Documentation for a Use Case: Send Email

Use Case Element	Description
Use Case Name	Send Email
Actor(s)	User (Primary), Email Server (Secondary)
Description	This use case allows a user to compose and send an email message to one or more recipients.
Preconditions	1. The user is logged into the email system. 2. The user has a valid internet connection.
Basic Flow	1. The user selects the option to compose a new email. 2. The system displays a blank email form. 3. The user enters the recipient's email address, subject, and message body. 4. The user clicks the "Send" button. 5. The system validates the email data. 6. The system sends the email to the email server for delivery. 7. The system confirms to the user that the email was sent successfully.
Alternative Flows	**A. Attach File:** At step 3, the user can attach a file before sending. **B. Save Draft:** The user can save the email as a draft instead of sending it.
Postconditions	1. The email is delivered to the email server. 2. A sent confirmation is displayed to the user. 3. A copy of the email is saved in the "Sent" folder.
